# Meeting Details

**Time:** 16 March 2022 4:00PM - 5:30PM

**All members** present for meeting

## BMG Retrospective A Board

### BMG Retro Board

BMG Retrospective 1 (Sprint 1: 8th March - 16th March)

#### Went Well

- Organisation of tasks between teammates, and communication within the team
- Communication and involvement in the project
- Good communication (frequent meetings)
- It was a good decision to agree on data schema before each side(Frontend/Backend) started working on its side since we didn't have many problems from having different ideas of data objects.
- Progressive Demo went well, smooth and no hiccups
- Redistribution of work after Xinyi left
- Quick pace of work - overcame the challenge of having a lack of a teammate, and worked fast to reaggregate tasks
- Fast learners and fast implementation in learning how tech stack works

#### To Improve

- Keeping the whole group in the loop about features instead of working in siloes
- Planning of epics and stories, since some like "delete user" involved creating a menu, creating an account page, and finally adding the "delete" function
- Testing could have been better, so that components are fully working when it is rolled out to master branch
- Documentation of tech stack (Frontend/Backend) could be clearer in some sections and better presented in others

#### Action Items

- Solution: Create channels for each person to update their progress as they do things
- To Improve: Keeping the whole group in the loop about features instead of working in siloes
- Will be handled by: Muhammad
- Solution: Sprint planning: run through all tickets in a spring before we begin the sprint, because we had some issues such as our "delete user" feature which involved creating a menu, creating an account page, and finally adding the "delete" function
- To Improve: Planning of epics and stories before every sprint with the team moving forwards
- Will be handled by: Andrew
- Solution: Make sure to explicitly allocate time/responsibility for testing the app
- To Improve: Testing could have been better
- Will be handled by: Younggil
- Solution: Better documentation of infrastructure
- To Improve: Documentation of codebase (frontend, backend)
- Will be handled by: Tobias
